Received: 21.05.2007

Accepted: 25.08.2007

In order to study of the form-genus *Cytospora*, around 400 specimens were collected from all over the Iran during 2003-2005. In this paper, the first part of the obtained results, including seven form-species are presented. *Cytospora atrocirrhata*, *C. carbonacea*, *C. gutnerae*, *C. nivea* and *C. rosarum* are reported as new members for mycoflora of Iran. Also, *Vitis vinifera* for *C. leucostoma* and *Celtis australis* and *Populus alba* for *C. translucens* are reported as new hosts (matrix nova) in the world.

Key words: Fungi, Taxonomy, Biodiversity, Coelomycetes

To observe the figures, refer to the Persian text.
